

Hardware Requirements

Sno.	Hardware	Description
1.	Development Machines (Laptop/PC)	Processor : Intel i5 or AMD Ryzen 5 (or better) RAM: Minimum 8 GB (16 GB recommended) Storage: SSD (256 GB or more) for faster load times Operating System: Windows, macOS, or Linux (based on your stack)
2.	Testing Devices	Mobile Devices: Various smartphones (iOS and Android) for testing Tablets: To test different screen sizes and resolutions
3.	Servers	Cloud Hosting: AWS, Google Cloud, or Azure for hosting your backend • RAM: Start with 4-8 GB (scale up as needed) • CPU: 2 vCPUs (scale based on traffic) • Storage: SSD storage for databases and media files
4.	Network	Reliable Internet Connection: High-speed internet for development and testing Router: Ensure you have a router that can handle multiple devices and high-speed access
5.	Additional Tools	Version Control: Git (using services like GitHub, GitLab, or Bitbucket) Collaboration Tools: Slack, Zoom, or Microsoft Teams for communication
6.	Backup Solutions	External Hard Drives or Cloud Storage: For backup and recovery purposes
7.	Security Tools	VPN or Firewalls: To secure your development and testing environments

Software Requirements

SNO.	Software	Description
1.	Frontend Development	Languages/Frameworks: • React Native or Flutter (for cross-platform mobile apps) • React.js, Angular, or Vue.js (for web interface) UI/UX Design Tools: • Figma or Adobe XD for designing user interfaces
2.	Backend Development	Languages/Frameworks: • Node.js (JavaScript), Python (Django, Flask), Ruby on Rails, or Java (Spring Boot) API Development: • Postman for testing APIs Authentication: • OAuth, JWT, or similar libraries for user authentication
3.	Database	Database Management Systems: • PostgreSQL or MySQL for relational databases • MongoDB or Firebase for NoSQL databases ORM (Object-Relational Mapping): • Sequelize (for Node.js), SQLAlchemy (for Python), ActiveRecord (for Ruby on Rails)

4.	Payment Processing	Payment Gateway Integration: Stripe, PayPal, or Square for handling payments
5.	Hosting and Deployment	Cloud Services: - AWS, Google Cloud Platform, or Microsoft Azure for hosting your backend Containerization: - Docker for containerization of your app
6.	Development Tools	IDE/Text Editor: - Visual Studio Code, IntelliJ IDEA, or Sublime Text Version Control: - Git (with platforms like GitHub, GitLab, or Bitbucket)
7.	Testing Tools	Automated Testing: - Jest, Mocha, or Cypress for frontend testing - Postman or Newman for API testing Performance Testing: - JMeter or LoadRunner for load testing
